

Job Opening

CLINICAL IMPLEMENTATION SPECIALIST

B•MHE, a management and technology consulting group dedicated to helping clients gain insight and maintain focus on improvement opportunities, is seeking a clinical implementation specialist to work on projects for various health care clients.

Interested applicants may submit resumes to Sharon Brickhouse Martin at sbmartin@brickhousemartin.com.

Position Scope

Leads or participates in information services projects to support new and installed clinical systems. Responsibilities include planning, design, testing, documentation, training, implementation, and support activities. Additional responsibilities include working with management and staff to define problems and devise solutions, performing work-flow analysis and process redesign, quality control, and problem and change management. Will serve as a major participant in new clinical systems implementation.

Requirements

- **Bachelor of science degree in nursing is required.** Additional education and/or certification in an information science field is highly desirable.
- Knowledge of patient care processes in a hospital setting.
- Understanding of "best practice" concepts in the delivery of patient care.
- Strong understanding and demonstrated ability to translate clinical needs into system applications to optimize clinical documentation and decision support.
- Experienced in project management methodology.
- Demonstrated skill in facilitating multidisciplinary groups to achieve optimal results.
- Excellent communication skills with all levels of employees.
- Good organizational skills.
- Ability to work independently
- Ability to adjust to various personalities in stressful situations and maintain positive interactions with users.

Work Experience

More than five years of clinical experience as an RN in a hospital setting. Two years experience in implementing systems and redesigning clinical operations. Experience utilizing clinical, financial, and ancillary systems within a hospital environment.
